

1. High-Level Product Brief for the Prioritized Project

(to be confirmed)

InPlace AI

Sage AI

HomeFit AI

StayWell AI

Main Goal

The primary goal is to help seniors by offering an efficient, easier-to-use application that automates the client intake, estimation, and work-order generation process for accessibility renovations.

The core technical objective is to automatically generate an accurate job quote, necessary grant paperwork, and a work order from a single client-uploaded photo.

Target Users

User Group	Primary Function/Role	Core Needs from the App
Seniors / Caregivers (Client)	End-User / Lead Generator	A simple, digital intake form to upload a photo and receive a quick, reliable estimate for a modification (e.g., grab bar, ramp).
Client Advisory Team	Client Advisory/Estimation Lead	A tool to quickly validate project "fit" and generate a transparent, tiered price quote for the client.
	Manual Fallback / Order Prep (Technical Support)	An automated system that can be used or easily overridden for manual tasks like generating drawings, pricing, and creating work orders until full automation is achieved.
	Project Manager (Operations & Execution)	Seamless integration with the project management system (BuilderTrend) to receive automated work orders for installation and execution.

Internal Grant Team (High-level Strategy, Grants)	Financial / Strategic Oversight	Automated generation of grant paperwork and eligibility checks to streamline funding and support the non-profit mission.
--	---------------------------------	--

Core Features (Minimum Viable Product - MVP)

- **Digital Intake Form:** A client-facing form that accepts a photo, floor plan and perhaps layout sketch of the area to be renovated.
- **AI-Driven Pricing Logic Integration:** A module that processes the modification request (based on inputs/photo) against the pre-defined Pricing Matrix (material, labor, margin) OR API Partner to generate a quote.
- **Grant Eligibility Module:** A feature that automatically checks the job type against grant criteria (e.g., CMHC, Provincial) and generates the required initial paperwork.
- **Work Order Generator:** Automated creation and transfer of a work order to the BuilderTrend project management system.

Success Criteria

The criteria are categorized by the area of business impact: Efficiency, Accuracy, Adoption, and System Quality.

Category	Measurable Success Criteria (KPIs)	Project Goal Alignment
I. Efficiency & Automation (Time-to-Quote)		
Automation Rate	Goal: Achieve 80% of small-ticket quotes (under \$10K, e.g., grab bars/ramps) generated automatically without manual input from Maria/other staff, using the photo-based system.	<i>Drives the "Best-case scenario" of automatic quote/paperwork generation.</i>

Cycle Time Reduction	Goal: Reduce the time from "Client Photo Upload" to "Estimate Delivered" to an average of <4 hours (or next business morning) for all automated jobs.	<i>Aims for rapid turnaround to secure "quick wins" and build volume.</i>
II. Accuracy & Business Impact		
Pricing Accuracy	Goal: Maintain an estimated price variance of <10% from the final quote for the top 5 most common modifications (e.g., grab bars, ramps, handheld showerheads).	<i>Ensures the AI-driven pricing is reliable for profitability and client trust.</i>
Lead Qualification Rate	Goal: The digital intake form/system successfully qualifies and moves 75% of submitted leads (photos/descriptions) into the "Estimate Delivered" funnel stage.	<i>Supports the Sales Funnel goal of 20 qualified leads/week.</i>
III. User Adoption & Integration		
Internal Workflow Adoption	Goal: Achieve 100% utilization of the new BuilderTrend integration for generating work orders and scheduling for all new InPlace Renovation projects by March 2026 .	<i>Ensures that the new system is the single source of truth for operations.</i>
External Intake Completion	Goal: 50% of all initial client inquiries are processed through the new digital photo-based intake form/process by March 2026 .	<i>Validates the usability of the front-end for clients and caregivers.</i>
IV. Technical Quality & Readiness		

System Stability	Goal: Maintain system uptime of 99.5% during core business hours (9 am – 5 pm EST).	<i>Ensures business continuity and reliability for the team and clients.</i>
Process Flow Compliance	Goal: The system must successfully generate all required documents (Quote, Grant Paperwork placeholder, Work Order) and route them according to the LandSeed → InPlace → Client → Execution workflow in 100% of automated cases.	<i>Validates that the software supports the defined business process and roles.</i>

2. Technical and Data Context

Existing Tools and Vendors

- **Project Management: BuilderTrend** (CRM/PM) is the existing platform for take-off, estimations, project management, work orders, and client communication, Accounting (AR/AP). The app must integrate with BuilderTrend.
- The Blueprint team should be aware that their work on pricing logic/automation needs to align with or integrate into these existing or developing components.

Data and Domain Knowledge Provided

We can immediately provide the following core data and context for development:

- **Pricing & Cost Data:** The Pricing Matrix spreadsheet provides the foundation for the cost estimation logic, detailing - to be further honed:
 - Modification Descriptions (e.g., grab bars, roll-in showers).
 - Material and Labor Cost Ranges (Low/High) in CAD.
 - Tiered Pricing Models (e.g., <\$10K at 100% markup, >\$50K at 35% markup).
 - Grant Eligibility per modification (e.g., CMHC, Provincial, etc).
- **Workflow Diagram:** A foundational document outlining the client and internal flow: LandSeed → InPlace Renovation → Client → Execution.
- **Sample Data:** We can provide sample photos for the digital intake, architectural drawings (Desinger's manual fallback work), and example work orders to help the team understand the required inputs and outputs.

3. Timeline and Future Collaboration

Ideal Overall Timeline

We have aggressive targets, with the key MVP integration and operational milestone set for **March 2026** ("Software/AI integration (Operational by March 2026)").

- **Project Initiation/Scoping:** December/January 2025
- **Traditional Ramp-up (Small Jobs Strategy):** January 2026
- **MVP Completion & Pilot Testing:** Aim for end of **February 2026**
- **Full Software/AI Integration Operational:** Target **March 2026**
- **Optimization & Refinement V2:** Target **April 2026**
- **Stabilization & Expansion V2:** Target **May 2026**
- **Scaling & Standardization V3:** Target **May 2026**

Next Release

April 2026: V2 - Optimization & Refinement

- **Focus:** Feedback Integration & Full Sales Funnel Automation.
- **Targets & Deliverables:**
 - **Data Review & Analysis:** Collect and analyze live data from the March pilot on key performance indicators (KPIs) like **Automation Rate** and **Pricing Accuracy**.
 - **Refined Digital Intake:** Deploy Version 2 of the client intake form, incorporating direct feedback from users (seniors and caregivers) to boost the completion rate and improve the quality of data capture.
 - **Full Sales Funnel Automation:** Complete the automation of the entire sales pipeline by automating the handoff between the digital intake and all subsequent stages in BuilderTrend (Lead Qualification, Estimation, Contract).

May 2026: V2 - Stabilization & Expansion

- **Focus:** Advanced Pricing Logic & Grant Integration.
-

June 2026: V3 - Standardization.

- **Targets & Deliverables:**
 - **V3 System Documentation:** Create a complete, detailed **Standard Operating Procedure (SOP)** that documents the entire end-to-end automated workflow for easy knowledge transfer.

- **Training Module Development:** Develop a set of professional training modules for onboarding new users on the V3 system (covering the Digital Intake, BuilderTrend usage, and the automated Pricing Tool).

4. Collaboration Preferences and Point of Contact

We see this system as a long-term strategic differentiator and would be happy to discuss continued maintenance and development support.

Collaboration Preferences

Given the high urgency for traction we prefer an Agile-style collaboration model with a high level of involvement. We would like to:

- **Attend Key Interviews:** We are willing to participate in interviews with end-users (seniors/non-profit partners) and our internal team and subject matter experts to validate requirements so long as they are well planned, initiated and hosted by the Blueprint team .
- **Review Sprints/Code:** We would appreciate a regular demonstration cadence (e.g., bi-weekly demos). We do not need to be involved in daily developer code reviews.
- **Communication Platform & Project Management:** Blueprint is expected to utilize a project management tool that supports effective communication with stakeholders and allows for clear phasing of work. Blueprint should inform LandSeed of their preferred platform; LandSeed suggests using Slack for direct communication.
- **Phased Involvement & Milestones:** LandSeed expects to be involved in each project phase. We request check-in sessions for each major milestone, with a suggested cadence of weekly at the start of the project, then moving to bi-weekly once the project is on track.

Primary Point of Contact

To ensure clear and efficient communication:

- **Primary Point of Contact (Day-to-Day Technical & Data):**
 - Patrick (Responsible for the Pricing Matrix and Workflow Design, which are the core inputs for the app). Also Responsible for the grant strategy, which is a key app output.

Preferred Meeting Cadence: We recommend a weekly, one-hour meeting with the core team (Patrick/Tracy and the Blueprint Project Lead) to review progress, clarify requirements, and remove roadblocks. We would like to have a set agenda for these meetings.

Questions Regarding the "Project Contract Template" provide by Blueprint.

Section "Defining the Solution's Budget : The following section will contain a breakdown of the budget project by the NPO for the entirety of the project timeline for the Project Name Project."

LandSeed will require the expected timelines for incurring itemized costs.

Section: GENERAL DEFINITIONS AND EXPLANATIONS

LandSeed will require the Blueprint team to provide recommendations on the MVP prior to finalizing the Project Plan.

Any changes required in the Scope, Cost and/or Schedule must be reported to LandSeed with a rationale included.

Section: MAINTENANCE

"Additionally, Blueprint provides a maintenance period of 30 days following the handoff date (depending on university examination schedules), during which we will provide development resources to fix any issues or bugs that may arise. Following the maintenance period, due to the incoming cycle of new nonprofit clients, it is not expected that Blueprint should provide development resources to continue maintaining the application."

Prior to the 30 days maintenance period, LandSeed will require recommendations on developers and expect efforts toward onboarding the new developers in order to continue maintaining the application.
